

## MAKES YOUR FACILITY SMELL & LOOK CLEAN!

Microbe-Lift® Drainline & Grease Trap Treatment (DGTT) is a proven bio-technology that consumes organic matter (grease, oil and fatty foods) that causes unpleasant odors and blockages in drains. Drains will smell clean and be free flowing without caustics or acids that cause damage to pipes and septic systems.

The friendly bacteria contained in DGTT are derived from 100% natural sources and goes to work immediately on contact.

- Environmentally Friendly
- Safe for Pipes, Drains and Fittings
- Safe for Garbage Disposals, Septic Tanks and Cesspools
- Contains Eight Highly-Effective Microbial Cultures

SOLUTIONS

## FOR COMMERCIAL USE

### DIRECTIONS

#### DRAINS & DRAINLINES

Add 4 ounces DGTT every other day for the first week, then add 4 ounces every week to control odors and keep your drains flowing freely. For problem drains, add 4 ounces two times a week.

#### GREASE TRAPS

For an average grease trap (2'x4'), add 8 ounces DGTT every other day for the first week, then add 8 ounces weekly. For stubborn or excessive odors, add 8 ounces Microbe-Lift® Industrial Blend/IND (available separately) along with DGTT every other day for an additional week, then go to weekly treatments with DGTT.

#### WASH DOWN

Mix one part DGTT with five parts water for use on floors, walls, concrete, tile or any surface that absorbs organic materials and grease. Mop or spray liberally over surface, allow to stand for 30 minutes to one hour, then rinse with clean water. Pour excess solution down drains to control odors and keep them free flowing.

**CAUTION:** Avoid contact with eyes. Flush immediately, if needed. Use gloves to avoid contact with skin and open wounds. If exposed, wash with soap and water. Do not use internally. Keep out of reach of children.

*If it stinks and flows... we have the solution*
